Standard for naming the signals in RS422/485 interfaces
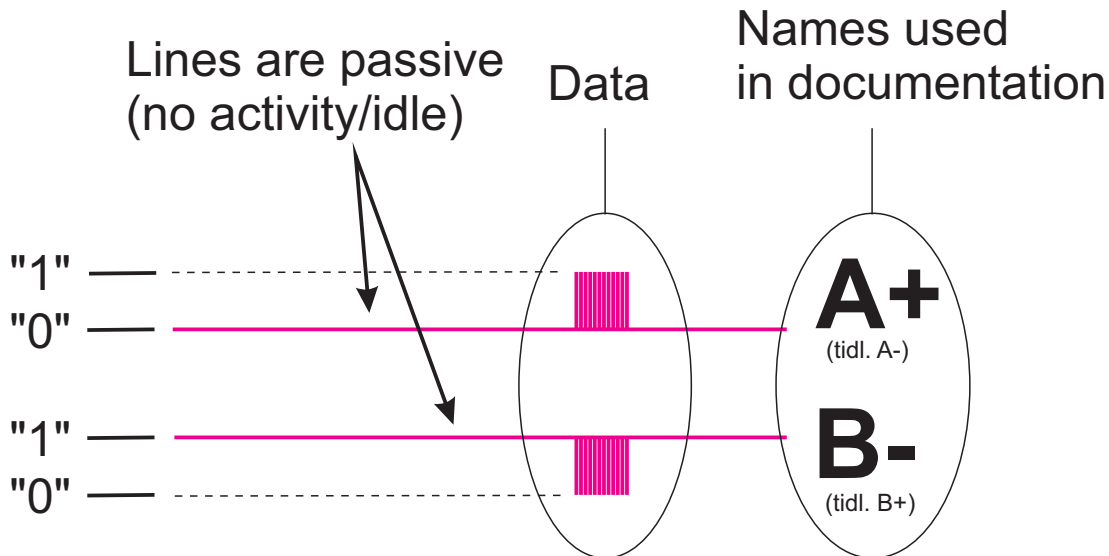

If more than one channel exist at the actual product the individual channels may be named as follows:

Channel 0 : **A0+** and **B0-**
Channel 1 : **A1**+ and **B1-**

etc.

If a text description is attached to the terminal name the following should be used:

A+ : Positive data signal
B- : Negative data signal
